

Adobe InDesign CS5 Interactive Documents with Adobe Indesign

COURSE OVERVIEW

Print continues to have a significant place in the information landscape, but it's sharing that space with an ever increasing number of platforms (the web, mobile phones, tablets, e-readers, and so on). As a result, creative professionals must adapt to a dramatic shift in the preferences and expectations of their audiences. Some stories are better told with video than with lengthy text explanations, and the fixed nature of a print page can limit the use of images to a mere few, while an interactive document can include a slide show in which many photos share the same space.

Learn how to create an interactive documents, presentations, and prototypes in InDesign that gives designers the control over format and typography they demand, in the application with which they're most familiar, but with enhancements like slide shows, button navigation, video, live hyperlinks, and more.

COURSE OBJECTIVE

By the end of the course, participant should be able to:

- Animate objects using built-in animation presets, motion path and your own customized settings
- Trigger animations when a page is loaded, when the animated object is clicked or rolled over, or when a button is clicked
- Build slide shows or change a frame's content using multistate objects
- Create buttons with normal, rollover, and click appearances
- Import and preview rich media files including FLV video and MP3 audio, among other formats
- Assign actions to buttons that provide document navigation; play/pause/stop an animation, sound, or video;
- launch an external web page in the user's browser; and more
- Export directly to SWF for desktop viewing in Flash Player 10.1 or on the web using a browser with the Flash Player 10.1 plug-in
- Export in native FLA format to add more advanced functionality in Flash Professional CS5
